

R20 pick-up

max. 20 cm | 8 inch

80-140 HP

Manage large quantities of prunings easily

The innovation of the **R20 pick-up** is the RADIAL INTERFERENCE CUT ROTOR. Due to the design of the RIC rotor the material is extremely finely crushed. The material is processed in a single pass and the result is 100% homogeneous.

The rotor was developed for crushing thick and voluminous material. R20 pick-up is particularly suitable for prunings of citrus fruit and olives as well as tomatoes and peppers.

Standard version and characteristics

- > Mulches wood up to 20 cm [8"] Ø and occasionally larger diameters
- > Working speed 0-7 km/h
- > ISO 3-point rear linkage central fixed cat. 1 & 2
- > Gearbox 540 rpm with freewheel and through shaft
- > Belt transmission
- > Rotor driven by tractor hydraulics - Required hydr. flow: 20 l/min [5,3 gpm]
- > Hydraulic hood with pick-up rotor, includes motor and hydraulic system with flow control
- > Lower pick-up kit including motor and hydraulic system
- > Support skids, adjustable in height
- > Support roller, adjustable in height
- > RIC rotor with MINI TIP RIC hammers with tungsten carbide tip
- > 4 rows of replaceable tempered counter cutters

Optional configuration and accessories

- > PTO drive shaft
- > Gearbox 1000 rpm
- > Medium fine shred kit (suitable for medium size material)
- > Ultra fine shred kit (suitable for small size material)
- > Front attachment
- > Config. without support roller
- > Rubber gauge wheels

R20 pick-up · Features

- Chassis and rotor profiles are made of wear-resistant steel.
- Operates at a fast and constant speed.
- Picks up and shreds 100% of the material in a single pass.
- Long service life of cutting tools.
